

BioIntelliSense Expands Its Medical-Grade Data Services for Remote Care With First-of-Its-Kind Symptomatic Events and Biometric Monitoring

FDA-cleared BioSticker™ medical device enables remote data capture of symptomatic events and multi-parameter biometrics for complex care and symptoms directly associated with COVID-19

Denver, CO – March 3, 2020 – [BioIntelliSense, Inc.](#), a continuous health monitoring and clinical intelligence company, today announces the introduction of the 5G-enabled BioHub connectivity gateway to its medical grade Data-as-a-Service (DaaS) platform. BioIntelliSense offers a new standard for Remote Patient Monitoring (RPM) by combining an effortless patient experience with medical grade clinical accuracy and cost-effective data services.

The graphic features the BioIntelliSense logo at the top center. Below it is the title "A New Standard in Remote Patient Monitoring" in a large white font. Underneath the title is a subtitle: "Medical-grade data services for continuous monitoring of vital signs, physiological biometrics and symptomatic events". The main content consists of 12 white icons arranged in two rows of six, each with a corresponding label below it. The icons represent: Skin Temperature (thermometer), Heart Rate at Rest (heart with pulse line), Respiratory Rate at Rest (lungs with arrows), Gait Analysis (foot with motion lines), Body Position (person with arrows), Steps & Activity Level (walking person), Fall Detection (falling person), Identity Management (person with fingerprint), Sleep (moon and 'Z'), Coughing Frequency (head with cough icon), Sneezing Frequency (head with sneeze icon), and Vomiting Frequency (head with vomit icon). At the bottom of the graphic, there is a small copyright notice: "© 2020 BioIntelliSense, Inc. All rights reserved. BioIntelliSense™, BioSticker™, MedEpoch™, the BioIntelliSense logo, and the BioSticker shape are trademarks of BioIntelliSense, Inc."

BioIntelliSense’s BioSticker™ medical device and data services now enable effortless remote data capture and reporting of a patient’s symptomatic coughing, sneezing and vomiting frequency.

“This represents a major breakthrough in clinical medicine. Objective measurement and trending of a patient’s symptomatic events, in addition to vital signs of skin temperature, respiratory rate and heart rate at rest, enable opportunities for earlier, proactive clinical intervention,” said James Mault, MD, CEO of BioIntelliSense.

A distinctive dimension of the medical-grade BioIntelliSense data service is that it offers multi-parameter remote patient monitoring and algorithmic reporting of minute-level vital signs, physiological biometrics and symptomatic events continuously for up to 30 days without charging via the BioSticker, a discreet single-use wearable device.

The BioIntelliSense DaaS platform can be applied to a wide range of clinical use cases, such as perioperative orthopedic joint replacement, oncology and infectious disease monitoring, including the primary symptoms associated with COVID – 19, as described by the Centers for Disease Control and Prevention ([CDC.gov Coronavirus Symptoms](https://www.cdc.gov/coronavirus/2019-ncov/symptoms/)).

About BioIntelliSense

BioIntelliSense is ushering in a new era of continuous health monitoring and clinical intelligence for Remote Patient Monitoring (RPM). Its medical-grade Data-as-a-Service (DaaS) platform seamlessly captures minute-to-minute vital signs, physiological biometrics and symptomatic events through an effortless patient experience. The FDA-cleared BioSticker™ device makes remote monitoring and early detection simple. Through the platform’s advanced analytics, clinicians will now have access to high-resolution patient trending and reporting to enable medical grade care in the home.
